Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Election/Restrictions

Applicant's election of group 2: Figs. 4a-4c and claims 6, 8-13, 15, 16, 25, and 35-38 are noted. However, claim 25 does not appear to read on the elected species because according to the specification, pages 35-38, the subject matter as set forth in claim 25 reads on Fig. 13a. Therefore, claim 25 has been withdrawn from consideration.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6, 8-13, 15, 16, and 35-38 are rejected under 35 U.S.C. 102(b) as being anticipated by Frenzi U.S. Patent 4,905,987.

In Figs. 1-3, Frenzi disclosed a water ride attraction comprising a stationary riding surface (1); a flowing body of water from the container (5) flowing over the riding surface in a predetermined flow direction; the riding surface has a planar portion (front portion), followed in the flow direction by a concave upwardly inclined portion (2) and an upwardly convex ridge portion (9); the flowing body of water flows over the riding surface in the manner as claimed. The riding surface comprises a downwardly inclined portion (12) downstream of the ride portion (9), and the water flows onto the downwardly inclined portion after flowing over the ridge portion. The attraction also includes a floor (10) adjacent the downwardly inclined portion, the floor having a drain

(the right portion of the riding surface) configured to drain off the water. The floor has a grate (14). The attraction as described above is more than capable of allowing a rider to utilize it in the manner as set forth in claims 11 and 26. The flow of water is certainly able to be adjusted to any particular velocity to accommodate any desired riding condition.
